

# UK Renewable Energy Generation - Annual Summary

## January 2006 to December 2006

### By Site

Data used in this compilation was obtained from the Renewables and CHP Register accessed through the Ofgem web site. The most recent date of Renewable Obligation Certificate (ROC) issue included in the analysis was 2<sup>nd</sup> August 2008. As the data on the Register may be updated daily the analysis is only applicable to the data downloaded on 8<sup>th</sup> November 2008. The analysis does not include ROCs revoked, cancelled, or deleted.

All information, including the installed capacity of each site, is available in the data downloaded from the Register.

#### Notes:

1. The total number of certificates identified in this report have been reconciled with the raw data downloaded from the Register.
2. The accuracy of the percentage values depends on the accuracy of the data downloaded from the Register. Any error in the number of certificates issued or the installed capacity will give incorrect percentage values.
3. The actual output is the cumulative total of ROC's issued in the year. The maximum possible output is the cumulative number of ROC's which could be issued if the output was continually at the maximum installed capacity value, without interruption, for the same time period. The percentage gives the ratio of the actual output compared to the maximum possible output.
4. Where the available data covers a period less than a full calendar year a second value is included where the maximum possible output is calculated for the full year, rather than the period for which ROCs were claimed.

19<sup>th</sup> April 2009

Most recent ROC issue date

2nd August 2008

Monthly output by location

January 2006 to December 2006

Data Collected from Ofgem

8th November 2008
